Database												

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The present sequence is murine cytokine receptor Zcytor14 DNA. The CC Ccytor14 polypeptide is useful for identifying or isolating Zcytor14 cc Zcytor14 polypeptide is useful for identifying or isolating Zcytor14 cc ligands, in preparing antibodies, in identifying proteins or peptide cc cleavage sites, in amino acid sequence analysis, and in monitoring or biological activities of both the native and tagged protein in vitro or in vivo. Polypeptides having Zcytor14 activity can be used to treat in vivo. Polypeptides having Zcytor14 activity can be used to treat continuantion, auch as rheumatonia arthritis. Zcytor14 polymucleotide may be used as educational tool in genetics, molecular biology, protein chemistry and antibody production analysis, in the preparation of expression constructs for bacterial, viral or mammalian expression, in determining mRNA and DNA localisation of Zcytor14 polymucleotide in tissues, for identifying related polymucleotides and polypeptides by cucleic acid hybridisation in linkage-based testing for various diseases contain a mutation in the Zcytor14 gene. Zcytor14 oligomucleotide probes are useful for in vivo diagnosis, and for detecting and localising cc Zcytor14 gene expression in tissue samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        540

```
CC one ZcytoR14 subunit, where the ZcytoR14 subunit comprises a polypeptide comprising fully defined 432 amino acids (SEQ ID NO. 3) or comprises CC amino acid residues 1-427 of a fully defined 667 amino acid sequence (SEQ ID NO. 24) given in the specification. Also described are: an isolated soluble receptor comprising ZcytoR14, where ZcytoR14 comprises a CC polypeptide having SEQ ID NO. 3; and where the soluble receptor reduces the pro-inflammatory activity of either IL-17A comprising fully defined 153 amino acids (SEQ ID NO. 14) or IL-17F comprising fully defined 153 amino acids (SEQ ID NO. 16); an antibody or antibody fragment that binds CC amino acids (SEQ ID NO. 16); an antibody or antibody reagment reduces the pro-inflammatory of either IL-17A (SEQ ID NO. 16); and where the antibody or antibody fragment reduces the pro-inflammatory of either IL-17A (SEQ ID NO. 16); and where the antibody or antibody fragment reduces the pro-inflammatory of either IL-17A (SEQ ID NO. 16); and treating a pathological condition in a subject associated with ZcytoR14 activity. The soluble receptor comprishing a least one ZcytoR14 cultority. The soluble receptor comprishing a least one ZcytoR14 cultority. The soluble receptor comprishing to active colities, crowing a disease, arthritis, atopic dermatitis, or culcerative colities, Crowing disease selected from inflammatory disease. CC septicemia, toxic shock syndrome, or infectious disease. This sequence colities, crowing shock syndrome, or infectious disease. This sequence colities and such and IL-17A and IL-17F receptor zcytoR14 variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                257 CTGGAGAGACTGATGGAGCCTCAGGACACTGCACGCTGCTCTCTAGGCCTCTCCTGCCAC 316

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                      The invention describes an isolated soluble receptor comprises at least one ZcytoR14 subunit, where the ZcytoR14 subunit comprises a polypeptide comparisating fully defined 432 amino acids (SEQ ID NO. 3) or comprises a comprises a maino acid residues 1-427 of a fully defined 672 amino acid sequence (SEQ ID NO. 24) given in the specification. Also described are: an isolated comprises a coluble receptor comprising SCYCR14, where ZcytoR14 comprises a polypeptide having SEQ ID NO. 3; and where the soluble receptor reduces the pro-inflammatory activity of either IL-17A comprising fully defined 153 amino acids (SEQ ID NO. 14) or IL-17F comprising fully defined 153 amino acids (SEQ ID NO. 16); an antibody fragment that binds to a polypeptide comprising fully defined 692 amino acids (SEQ ID NO. 16); and where the antibody or antibody fragment reduces the pro-inflammatory cc and where the antibody or antibody fragment reduces the pro-inflammatory disease in which IL-17A or IL-17A (SEQ ID NO. 14) or IL-17F (SEQ ID NO. 15); and where the antibody or antibody fragment inflammatory disease in which IL-17A or IL-17F plays a ccivity of either IL-17F-induced inflammation; treating a mammal or afflicted with an inflammatory disease in which IL-17A or IL-17F plays a color; and treating a pathological condition in a subject associated with coloring inflammatory disease, e.g. anthma; choic inflammatory disease selected from inflammatory bowel disease, chonic inflammatory disease selected from inflammatory bowel disease, choic inflammatory disease selected from endotoxemia, or septicemia, toxic shock syndrome, or infectious disease. This sequence comprises the subject as mouse IL-17F receptor zcytoR14 variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTGGAGAGACTGATGGAGCCTCAGGACACTGCACGCTGCTCTCTAGGCCTTCTCTGCACGC316

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to murine cytokine receptor, Zcytor14. The Zcytor14 polypeptide is useful for identifying or isolating Zcytor14 ligands, in preparing antibodies, in identifying proteins or peptide cleavage sites,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of CDNAs isolated from human, murine and rat skin cell libraries. The sequences can be used in the development of therapeutic agents useful in the treatment of skin diseases, including skin wounds, cancer, growth defects, developmental defects and inflammatory diseases. The proteins have important roles in the induction of hair growth, cell proliferation have important and cell-cell interaction, in maintaining tissue integrity, in wound healing and in modulating immune responses. The present sequence is a cDNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; rat; mouse; skin cell; skin wound; cancer; growth defect;
